

PRESS RELEASE

Dural's "Diamondstep" puts design and safety on an equal footing / 16 colours, three widths and four heights, for easy adaptation to all applications

With the new "Diamondstep" range of profiles, Dural is a step ahead in putting design and safety on an equal footing. Reliably non-slip and permanently highly resistant, these profiles prove their merits in stair areas in both private homes and public buildings. With their outstanding versatility regarding colour coordination and with the elegantly shaped silver model made of anodised aluminium, they enhance stairs with respect to both safety and aesthetics.

Particularly easy to install, and extremely effective with respect to: the selection of colours for the non-slip “Diamondtred” safety inserts, with a total of 16 colour tones (two with after-glow effect).

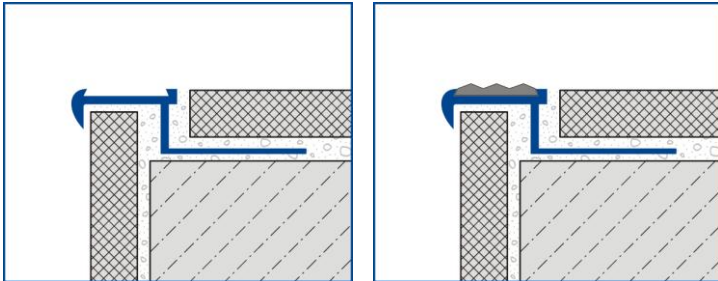

These safety inserts are available as 13 mm wide strips. They bond easily, can be replaced without difficulty and take up little warehouse space since they come in space-saving rolls. In this case, the coloured inserts are put in place and fixed after the aluminium step profiles have been installed. The customer can then choose his/her own colour for the stair area as desired or as per the design concept.

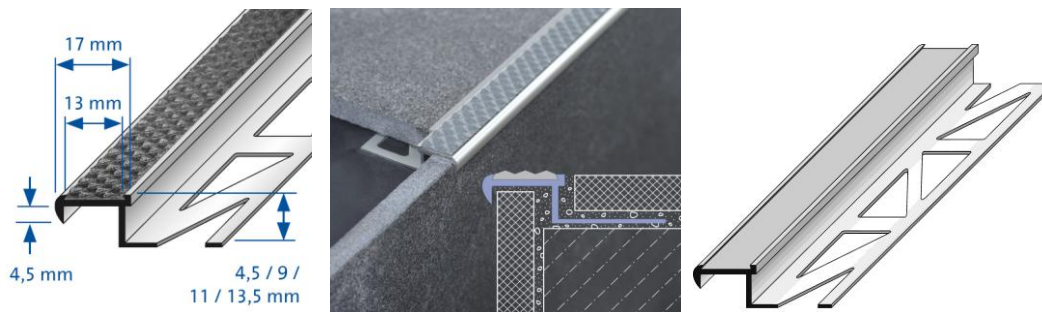

As a convenient product solution, Dural also supplies completely pre-assembled profiles as finished products. In this case the inserts come in midnight black (106), anthracite (107), steel grey (113), cocoa (109) and sand (110). With these top sellers, Dural is perfectly in step with current trends in floor-tiles.

The “R 10 V4” non-slip class makes every step a whole lot safer.

“Diamondstep” is extremely effective in protecting stair edges and flooring materials from mechanical damage. And the high-quality anodized basic profiles, available in heights of 4.5 mm, 9 mm, 11 mm and 13.5 mm, have a further beneficial feature: thanks to the special profile section, they also hide any unsightly cut edges of floor tiling.
