

Expansion joints (flat) without visible fixing for laminates and parquets

Application:

MULTIFLOOR transition profiles have a smooth, uninterrupted surface with no screws, providing the perfect covering for expansion joints in laminate or parquet floors.

Properties:

MULTIFLOOR transition profiles are fitted by means of movable, plastic-laminated plugs that can be separated by varying distances and are inserted into pre-drilled holes. The profile automatically adapts to the height of the floor covering on either side of the junction and does not need to be adjusted subsequently. The profiles have a flat surface form that lies almost flush on the flooring and fits smoothly and harmoniously with the respective covering, for example at door thresholds. The smooth surface of the profiles with no unsightly screws gives the perfect finish to the flooring.

Material:

Aluminium anodised in gold, silver, bronze and champagne colours or featuring PVC foil covering with an imitation wood finish in light maple, maple, beech, oak, antique oak, rustic oak, kempas, cherry or merbau.

Maintenance:

MULTIFLOOR profiles require no special maintenance. Dirt can be cleaned off using normal cleaning agents. These agents must be free of hydrochloric or hydrofluoric acid and must not be abrasive.

Width:

40 mm

Length:

90 / 100 / 270 cm
